IBM SkillsBuild Program
20 August 2025

The Air Force School successfully conducted the **IBM SkillsBuild Program** on 20th August 2025, under the guidance of the IBM SkillsBuild team. The session was organized to provide students of classes IX & XI with an orientation on the usage and benefits of the IBM SkillsBuild Digital Learning Platform.

The resource persons, **Mr. Subham Sand, Mr. Rakesh Saini, and Mrs. Pratima**, introduced the platform and explained its features in detail. They highlighted how the platform equips students with **future-ready skills** in diverse fields such as Artificial Intelligence, Cybersecurity, Data Science, Chatbot Development, Resume Building, Communication Skills, and Digital Literacy.

The session began with a comprehensive introduction to IBM SkillsBuild and its role in preparing students for various job segments. Following this, the trainers supported the students in accessing the platform and guided them through the process of enrolling in different courses. Hands-on assistance was provided in the computer lab, ensuring that each student was able to log in and begin their learning journey.

Students actively participated in the orientation and expressed keen interest in exploring the available courses. The program is expected to help them earn **digital badges and globally recognized certificates**, thereby strengthening their academic and professional profiles.

The initiative proved to be highly beneficial in motivating students to enhance their digital skills and align themselves with industry demands. The school appreciates the efforts of the IBM SkillsBuild team and looks forward to continued collaboration for empowering students with such innovative learning opportunities.
